

Attractive 2- and 3-FP Plasma and Coil Configurations – Recent Configuration Development Results

Long-Poe Ku¹ & Paul Garabedian²

¹Princeton Plasma Physics Laboratory

²Courant Institute of Mathematical Sciences, New York University

ARIES Project Meeting, February 24-25, 2005

General Atomic, San Diego, CA

Topics of Discussion

- Development of A~2.5, two field-period configurations
 - MHH2-1104, physics characteristics and coil design
 - MHH2-K14, physics characteristics and coils
- Development of A~4.5, three field-period configurations
 - KQ26Q, physics characteristics and coil design
- Summary and Plans
